

Application Examples:  
**Customisation in the  
Medical Environment.**

## Customisation in the Medical Environment: For your Health.

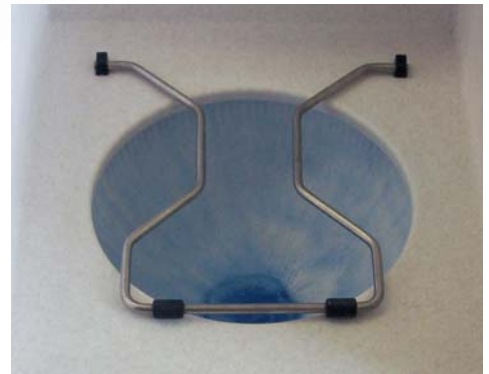

Roskopf & Partner AG is one of the leading specialists for the distribution and fabrication of top-quality materials. Make use of our experience, our expertise and our possibilities to design your medical facilities to present a friendly, comfortable and hygienic atmosphere.

### We are your partner

- We have years of experience and unique expertise. Everything that is possible with materials we can fabricate.
- We advise and support you from the beginning – even with ideas, planning and material selection.
- We have the assets and the capability to fulfil your wishes, requirements and expectations at the highest level of quality.

### Ideal, if you are looking for unusual and practical solutions:

- Solid surface material such as HI-MACS® or quartz materials, such as SILESTONE® are not only because of their functional characteristics ideal for applications in the medical arena.
- Harmonious worlds of colour, the eloquent feel to the touch and accents carefully designed to backlight the products create a relaxing atmosphere in which every patient can feel comfortable.
- The wide range of variations and combination simplicity make it possible to integrate every idea and wish.
- For example, it is possible to combine an easy-to-clean basin from the **lavanto®bowl** series for the working area or a custom-made sink from the **lavanto®sink** series in a groove-free transition with a solid surface material worktop and alcove cladding. Additionally, it is possible to use special work processes to design and manufacture basins more simply and comfortably.
- The pore-free surfaces manufactured without grooves are absolutely hygienic and easy to clean – and they are impervious to moulds, bacteria and mildew.
